Junit Test Script

Script: Geo Lookup Test

```java
package com.informatixinc.calnotify.utils;

import org.junit.Test;

import com.informatixinc.calnotify.model.Address;

import com.informatixinc.calnotify.model.Point;

import com.informatixinc.calnotify.utils.GeoLookup;

import com.informatixinc.calnotify.utils.ProjectProperties;

public class GeoLookupTest {

        @Test
        public void lookupAddressTest(){
                ProjectProperties.init();

                Address address = new Address();

                address.setAddressOne("2485 Natomas Park Drive");

                address.setCity("Sacramento");

                address.setState("CA");

                GeoLookup geoLookup = new GeoLookup();

                Point point = geoLookup.latLongFromAddress(address);

                assert(point != null);
        }
}
```
